

Introduction and Overview **Eastman Chemical Company AIA Continuing Education Program**

Eastman Chemical Company is an active participant in the Continuing Education System provided through the AIA. The title of our course is *Advanced Design and Privacy with Decorative Window Films*. The course number is **0CPF04**.

The presentation exposes participants to the many benefits provided through the application of decorative window films. Participants will receive an extensive overview of all facets of this versatile product. However, the pace of the presentation is kept brisk and fresh with case studies and real world applications.

Decorative films offer design professionals a cost effective option to incorporate creativity and beauty into existing glazing. The extensive product offering combined with a designers' creativity allows for an array of color and design options.

The topics covered in the presentation are listed below.

- Product description
- Markets served
- Product options
- Overview of decorative films
- Design options
- Decorative film case studies
- Product warranties
- Frequently asked questions

As a result of this presentation the design professional will gain a general knowledge of:

1. How to incorporate design using decorative window films.
2. How to specify decorative window films.
3. The steps involved from design to application.
4. What designs require a laser plotter or a custom cut.

The contents of the presentation are generic and abide strictly to the rules provided through the AIA Continuing Education System. A sign-up sheet is provided during the presentation and Eastman Chemical Company will submit all information to the AIA in a timely fashion.
